To our community:

Replit is a fundamental education technology tool. Like the great tools of learning before us, we assume the mantle of responsibility to protect the people using our platform. We are committed to ensuring that students and teachers alike can use our services to write code and build community safely and securely.

To clarify what we do, our platform provides the following services for students:

- Author, execute, and share program code with a broad audience of makers and learners.
- Remix and reauthor code shared from the community.
- Submit code as part of Computer Science coursework; both for secondary and higher education.

You can follow these steps to ensure Replit is fully unblocked for teachers and students.

Replit does not and will never provide services like proxying or VPNs to obscure user traffic from the broader internet. Any attempt to use our services to conceal user intent will result in immediate removal.

The actions we have taken to secure our community include:

- Complying with FERPA, COPPA, CCPA, & GDPR privacy regulations.
- Not collecting unnecessary personal information from students and limiting access to the forum.
- Hosting all services over encrypted HTTPS protocols.
- Banning community members engaging in cyberbullying or online harassment.
- Removing and preventing access to illicit materials.
- Investigating and removing DMCA violations.

You can read more about our commitments to privacy and data security on our site. If upon review of our actions, any member of our community feels that we are not doing our best, we will address those concerns transparently and swiftly.

Sincerely,

Amjad & The Replit Team
